# EMPOWERING A SECURE GLOBAL WORKSPACE FOR ENTERPRISES

Discover TeamViewer Tensor™, the Enterprise Remote Support, Remote Access and Remote Device Control SaaS Solution You Can Deploy and Scale in Hours, Not Days.

## REMOTE CONNECTIVITY AT SCALE

Built from the ground up for large organizations and based upon the world's largest remote connection infrastructure, TeamViewer Tensor™ scales linearly to the needs of your enterprise, providing the industry's leading connectivity and real-time support tools in a convenient, ready-to-deploy highly secure SaaS environment.

## OUR SOLUTIONS

### 1. Centrally Control Remote Connections

Control TeamViewer usage, define and enforce access rules at account, group or device level. Now you can manage and control all connections centrally and restrict the connection type, with a dedicated provisioned infrastructure.

### 2. Provide End-User Support internally and externally at Scale

Consequently the text below would need adjustments Software updates, security patches, system crashes. End-users face technical issues all the time. TeamViewer Tensor™ allows your enterprise IT support to solve technical problems quickly for your teams wherever they are, whatever their devices. You can deploy our solution in minutes to thousands of devices without interrupting users in their work.

### 3. Remote Access, Admin and Control of Servers

You are always just a few clicks away from any server, no matter where they are located. When it comes to managing and maintaining remote servers hosted in data centers, in-person management isn't always the most cost-efficient solution. Enable permanent access to unattended servers with the appropriate permissions, assign user rights to remote servers to prevent unauthorized access and administer updates and resolve problems before they impact your business.

### 4. Empower Your Employees to Work from Anywhere, at Any Time

TeamViewer Tensor™ completely changes the paradigm of remote connectivity by allowing you to assign appropriate user access rights to employees so they can get full desktop access to their work computers and network servers, right from their mobile devices or laptops. No need to battle with low latency of VPN.

### 5. Remotely Manage, Operate and Support POS Machines, Displays and Edge devices

Companies operating a larger network of point-of-sale (POS) systems or digital signage solution turn to TeamViewer Tensor™ when they want to reduce downtime and travel costs. With TeamViewer Tensor™ preinstalled on remote terminals, support is minutes, not hours away.

## KEY FEATURES

### Single Sign-On

TeamViewer Tensor™ works with any identity provider that uses SAML 2.0 for cloud-based identity control.

### Device-Agnostic Connectivity

TeamViewer Tensor™ supports Android, iOS, Linux, MacOS, and multiple Windows versions.

### Comprehensive Logging

With TeamViewer Tensor™ you can audit every connection made to and from PCs to the TeamViewer Tensor™ platform and all activities in the management console.

### Mass Deployment & Silent Rollout

TeamViewer Tensor™ can be installed and updated silently on all your corporate devices by network admins with appropriate security access and interruption-free for users.

### Conditional Access

Control centrally TeamViewer usage and access rights using a rule engine. Conditional access provides an additional layer of security for your corporate network.
